Goal 2: Workforce & Economic Development

System Initiatives:

Faculty, staff, and students in the Montana University System (MUS) are engaged in science and technology research and graduate education that help build Montana’s economic future. The MUS research enterprise also builds partnerships with communities, businesses, and other educational entities to help align science education and research with pressing social and economic challenges.

Expanding graduate education capacity and opportunities will help grow the MUS research enterprise. The following initiatives are key to this effort:

- Improved stipends and resident tuition status to attract competitive graduate students;
- Sufficient start-up funding packages and salaries to retain and recruit competitive faculty;
- Strategic addition of graduate programs to meet workforce needs and research opportunities; and
- Innovative partnerships and financing to build modern facilities and a competitive research infrastructure.
